PROTECTION VIA DATA-CENTRIC SECURITY.

Traditional perimeter security is failing. The threat from advanced persistent threats shows no sign of easing every business in its path.

APT

One key ingredient of APTs is obtaining access to privileged user accounts. This fundamental flaw in distributed systems enables attackers to compromise data.

Monitoring and detection are critical, but preventing privileged users and their access from being used against your organization to compromise data is vital.

Most organisations don't even know when they have been targeted.

The average number of days before detection was over 200 days. We will share...and...demo

- 1. How APTs and other intrusions exploit privileged user accounts;**
- 2. How to protect those accounts without hindering IT operations;**
- 3. How to detect APTs and vitally, how to protect the organization from the consequences of an exploit.**

On vous attend....à la suite#19 « WhiteHouse »
